TJX-220 Drug Inspecting (Static Electricity Eliminating) Machine

Use:

Model YJX220 Drug Inspecting (Static Electricity Eliminating) Machine is a kind of new product developed and produced by our company through absorbing advanced technology from abroad according to the requirement of the pharmaceutical industry at home. It can make the capsules and tablets (pill) drop on the stainless steel conveyer roller uniformly through the feeder. The drugs turn on the conveyer roller and meanwhile move forward with the conveyer roller, and then after static electricity elimination and artificial inspection, substandard product will be picked out, thus achieving the aim of separating drugs and eliminating static electricity, Up to the GMP standard and without blind angle or spot on inspection, this machine is a kind of ideal equipment for inspecting the appearances of capsules and tablets (pills).

- 1、 The whole machine is made of stainless steel, it can reduce contact between operator and drug and is up to GMP standard

2;It is convenient for artificial inspection by step less speed regulation of drug turning and conveying

3、 With the function of static electricity elimination, it can prevent and reduce the static electricity of drug efficiently

With simple and easy operation, it can reduce labour intensity and raise working efficiency greatly

Main Technical Parameters:

Weight: 180kg

Power supply: 220V 50HZ

Output: 0.75kw

Overall dimensions: 1900X460X1230mm(LXWXH)

Medicine to be used: Capsule00#-4# and pill、 tablet diameter less than25mm
